SUMMARY

Full Stack Developer with mid-level experience delivering cloud-native solutions in fintech and e-commerce. Led the creation of an AI-driven chatbot for JPMorgan Chase, integrating OpenAI and LangChain to cut manual support effort by 40%, and built a high-throughput e-commerce platform at TatvaSoft that boosted transaction throughput by 35%. Proficient in Java, Python, TypeScript, React, Node.js, AWS, Docker, and microservice architecture, with a strong focus on secure, scalable design. Seeking to apply this expertise to accelerate product innovation and operational efficiency.

TECHNICAL SKILLS

- **Programming:** Java, Python, TypeScript, JavaScript, Dart, SQL
- **Frontend:** React.js, Next.js, Flutter, HTML5, CSS3, Tailwind CSS
- **Backend:** Node.js, Express.js, Spring Boot, FastAPI, Django
- **Databases:** PostgreSQL, MongoDB, MySQL, Redis
- **DevOps & Cloud:** AWS (EC2, S3, RDS, Lambda), Docker, Kubernetes, GitHub Actions, Terraform, Linux
- **Messaging & APIs:** REST APIs, GraphQL, Kafka, WebSockets, WebRTC
- **Testing & QA:** Jest, JUnit, Cypress, Postman, Unit Testing, Integration Testing
- **Security:** OAuth2, JWT, RBAC, API Security, SSL/TLS, Row-Level Security
- **AI & Intelligent Systems:** OpenAI API, LLM Integration, Fine-tuning, LangChain, LangGraph, Vector Databases (FAISS, Pinecone), RAG
- **SDE Concepts:** Data Structures & Algorithms, Object-Oriented Design (OOD), System Design, Microservices, Distributed Systems, Multithreading & Concurrency, Performance Optimization, Clean Code
- **Methodologies & Tools:** Agile (Scrum, Kanban), Git, Jira, Confluence, CI/CD Practices

PROFESSIONAL EXPERIENCE

JPMorgan Chase & Co.

Jan 2026 - Present

Full Stack Developer Intern

- Developed AI-driven chatbot services using Python and FastAPI, enabling automated handling of customer queries across web and mobile banking channels, which reduced average response time and improved customer satisfaction
- Integrated OpenAI API and LangChain to build context-aware conversational workflows, improving response accuracy and reducing manual support effort by 40%.
- Implemented vector search capabilities using FAISS to enhance semantic retrieval of customer queries and knowledge-base matching, resulting in faster query resolution for support agents
- Designed secure API endpoints with OAuth2 and JWT, ensuring compliance with enterprise-grade authentication and data-protection standards, which increased system security and lowered unauthorized-access incidents
- Containerized microservices using Docker and deployed on AWS infrastructure, improving system scalability and reducing response latency by 25%.
- Collaborated with cross-functional teams in Agile sprints using Jira and Git, contributed to feature development, integration testing, and CI pipelines (e.g., Jenkins), which accelerated release cycles and improved code quality

TatvaSoft

Jan 2020 - Jul 2023

Full Stack Developer

- Engineered a scalable e-commerce platform using React.js and Node.js, supporting high-volume transactions and improving system throughput by 35%.
- Designed and built RESTful APIs with Express.js, applying API-security best practices, which cut API response time by 28% and enabled integration with payment gateways
- Optimized PostgreSQL database queries and indexing strategies, improving data retrieval performance by 32% across order and inventory modules.
- Built responsive and accessible UI components with React.js and Tailwind CSS, enhancing user engagement and increasing conversion rates by 18%.
- Integrated third-party services including Stripe and shipping APIs, streamlining checkout workflows and reducing transaction failures by 20%.
- Implemented secure authentication and authorization using OAuth2 and JWT, ensuring compliance with modern web security standards.
- Containerized application services using Docker and deployed on AWS EC2 and S3, improving deployment consistency and environment reliability.
- Collaborated in Agile sprints using Jira and Git, contributing to feature delivery, code reviews, and continuous integration practices across cross-functional teams.

PROJECTS

Real-Time Collaboration Platform - SaaS Productivity Application

- Architected a real-time collaboration system using WebSockets and Node.js, enabling live document editing and synchronized updates across distributed users.
- Implemented state management and client-side caching using Redux and IndexedDB to support offline-first functionality and seamless data synchronization.
- Integrated GraphQL APIs with Apollo Client to optimize data fetching and improve frontend-backend communication efficiency.

Data Pipeline & Analytics Platform - Cloud Data Engineering System

- Built end-to-end data pipelines using Apache Spark and Apache Airflow for automated data ingestion, transformation, and scheduling workflows.
- Designed scalable data models in Snowflake and implemented ETL processes to support business intelligence and reporting use cases.
- Developed interactive dashboards using Tableau to visualize key business insights and enable data-driven decision-making across teams.

PUBLICATIONS

- MST: A Modified Sparse Transformer with depth-aware attention for multi-modal camera-LiDAR fusion in autonomous vehicles.- *Transportation Research Interdisciplinary Perspectives | Volume 34, November 2025, 101571*
